Problem #1

LEARNING INSTITUTION

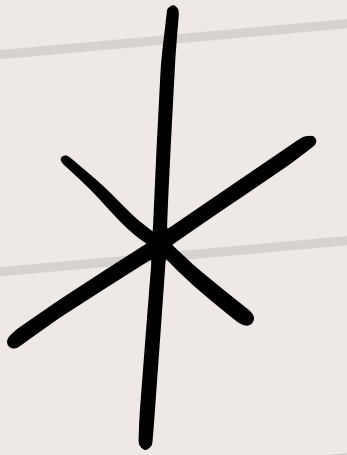

Most schools and universities do not have a reliable system to record student attendance, which can usually be done manually through attendance registers or marking cards, though, these methods make it prone to fraud. Additionally, there is no effective tool that could track student engagement levels during classroom sessions or lectures. Similarly, the security issues cannot be effectively resolved using old-fashioned security systems comprising CCTV cameras, which only records videos without any intelligent behavior analysis.

Problem #2

WORKPLACE / OFFICES

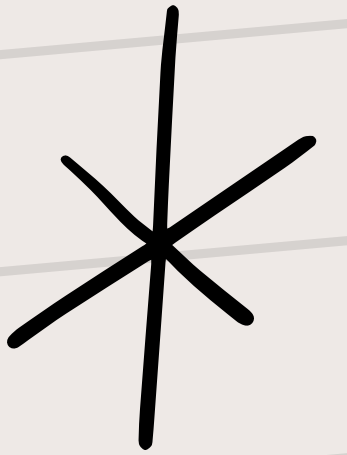

In most workplaces, there is inefficiency in the manner that attendance is managed, using either inputted information manually or through simple systems using cards. Moreover, many companies currently lack behavior monitoring devices or systems. Hence, there is lack of information for the management team to analyze staff productivity. Another area of weakness is security as present systems do not have a predictive capacity.

Problem #3

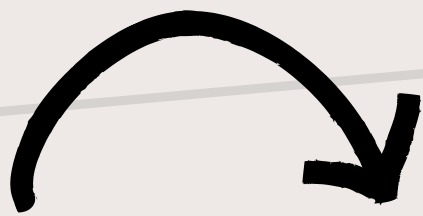

PERSONAL PROPERTY

At home, people tend to find themselves in a position where it becomes challenging for them to exercise self-control and maintain productivity, particularly when working from home or other isolated areas where there is no proper monitoring system. In addition, people's security remains a rising issue since conventional closed-circuit television systems lack intelligent capabilities that can be alert on any unusual activity.

Project Solution

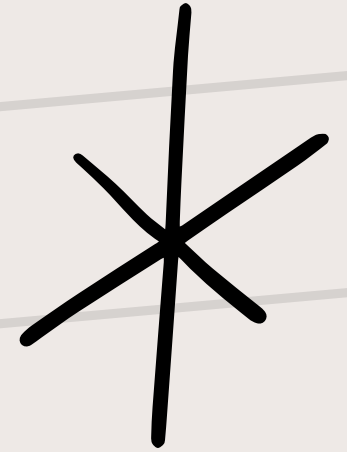

EngageIQ

To address these challenges, we created EngageIQ, a CCTV camera embedded with AI features that can resolve all of the problems stated. Our product, EngageIQ has special features that differentiate us from normal CCTV cameras. This product combines the function of a regular CCTV camera with an added attendance, behavior and safety monitoring system. This device comes with an application that will complement the functions of EngageIQ.

Target Audience

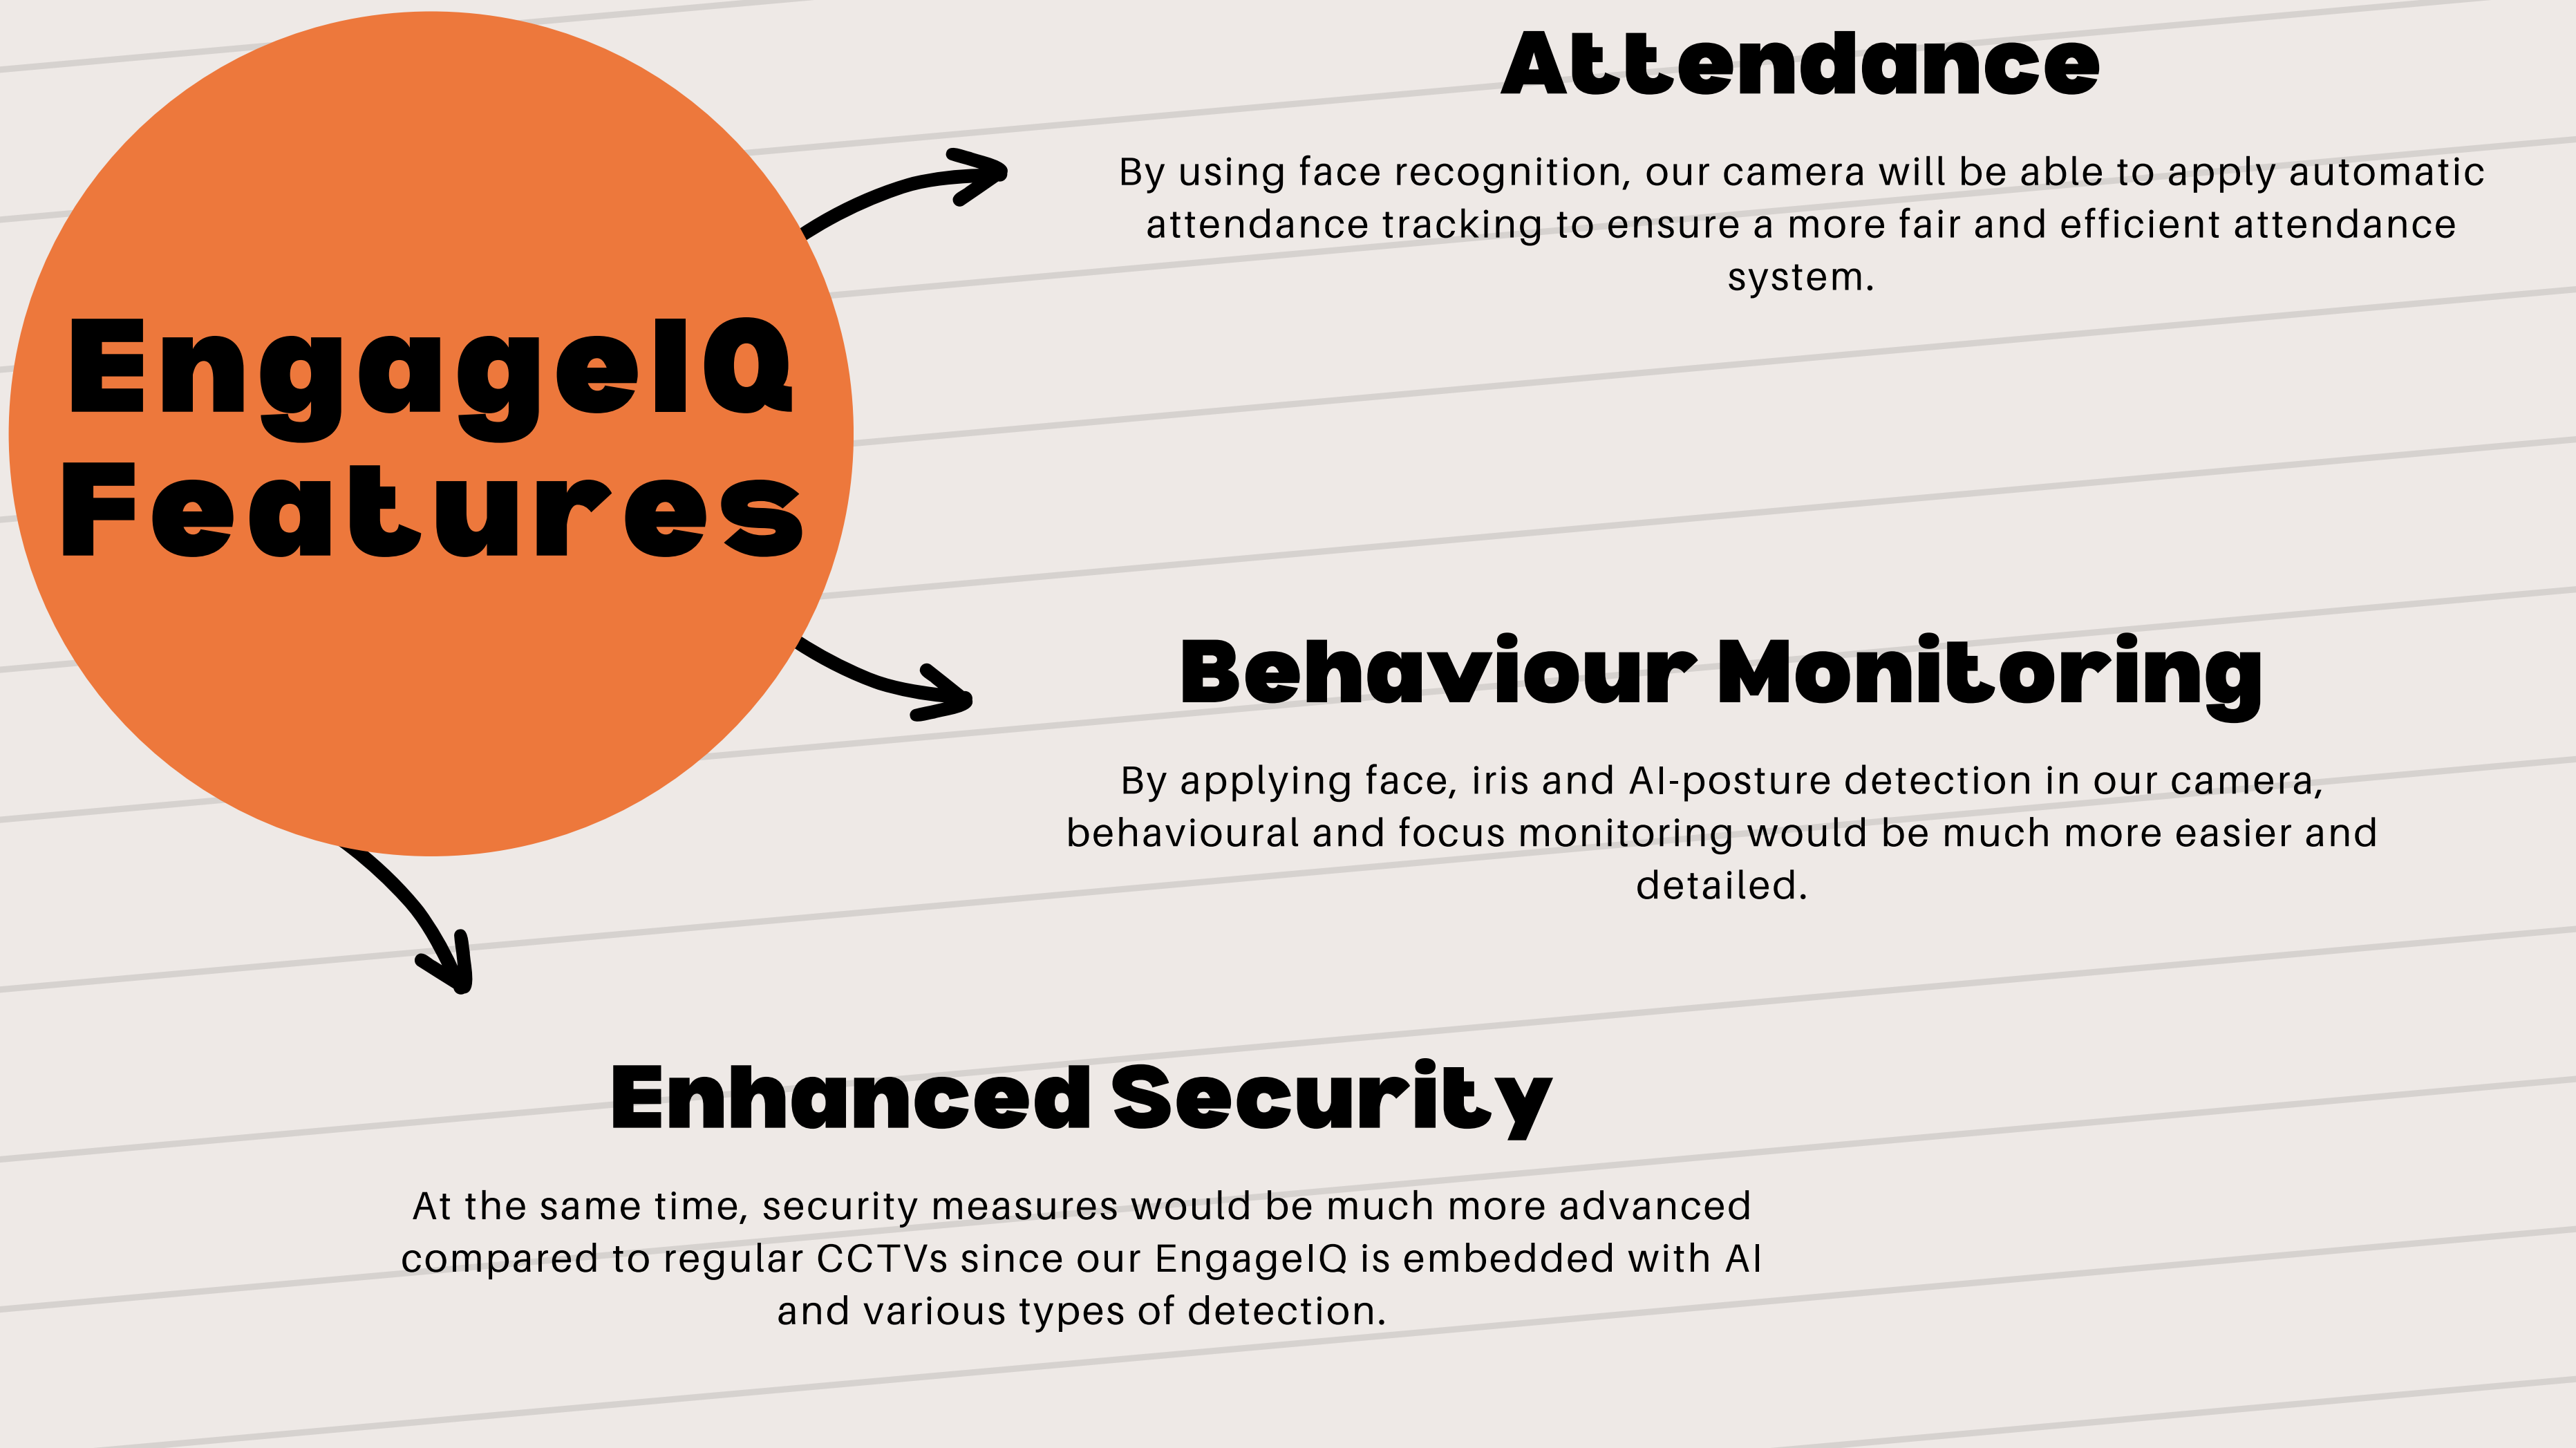

◆ LEARNING INSTITUTIONS

◆ OFFICE ADMINISTRATIONS

◆ PERSONAL USE

```
graph LR; A((EngageIQ Features)) --> B[Attendance]; A --> C[Behaviour Monitoring]; A --> D[Enhanced Security];
```

EngageIQ Features

Attendance

By using face recognition, our camera will be able to apply automatic attendance tracking to ensure a more fair and efficient attendance system.

Behaviour Monitoring

By applying face, iris and AI-posture detection in our camera, behavioural and focus monitoring would be much more easier and detailed.

Enhanced Security

At the same time, security measures would be much more advanced compared to regular CCTVs since our EngageIQ is embedded with AI and various types of detection.

SDG 4 (Quality Education)

- Improve student's performance and focus in class.
- Assist teachers and lecturers to identify struggling students.

SDG 9 (Industry, Innovation & Infrastructure)

- Introduces an AI-embedded CCTV camera with various features
- Promotes AI benefits and AI-driven technology
- Promotes digital transformation

SDG 8 (Decent Work & Economic Growth)

- Enhances employee productivity in offices or workplaces
- Provide fair and accurate attendance monitoring
- Assist admins to manage workers and identify struggling employees

SDG 11 (Sustainable Cities & Communities)

- Enhanced cities, schools, offices and home safety
- Promotes safer environments
